PROFESSIONAL EXPERIENCE

L3 Harris

Software Engineer – NodeJS / Typescript

Salt Lake City, UT

June 2025 – Present

- Designing and implementing a scalable Angular/Node.js scripting framework that empowers users to create and run hardware validation scripts, accelerating testing cycles and increasing test coverage.
- Architected and led development of a highly configurable mock API platform using Node.js, TypeScript, and Express, enabling multiple teams to emulate production services via OpenAPI definitions.
- Drove company-wide adoption of Playwright by delivering a production-ready POC, automating complex mission setup and asset lifecycle workflows (CRUD) end-to-end; eliminated substantial manual test effort by generating randomized inputs, persisting test artifacts, and exporting structured results to HTML/PDF, establishing a foundation for long-term test automation strategy.

Plaid

Software Engineer – NodeJS / Typescript

Salt Lake City, UT

May 2021 – June 2025

- Developed back-end integration applications in NodeJS/Typescript retrieving data from disparate sources (RESTful Web APIs, GraphQL, HTML parsing with CSS selectors, etc.)
- Implemented a remote Chromium service running outside of our regular NodeJS service to handle browser automation. Developed integrations between the services using WebSockets, cutting costs by ~8k a month.
- Implemented OAuth 2.0 (PAR) for American Express integration, resulting in a more secure OAuth flow and allowed better tracking of user consents.
- Developed a product to automate transferring investments between financial institutions, leveraging Protobufs and existing APIs unlocking 1M in ARR.
- Proposed and implemented an alerting solution written in Typescript, utilizing Kafka, which helped reduce error rates to <0.5% for 90% of users.
- Developed dashboard using AWS Redshift to identify perpetual user errors and make them easily query-able. This resulted in quicker troubleshooting for these error types.
- Implemented improved redaction strategy for request hashing on URL path and query parameters in Typescript, securing user data before PostgreSQL storage and resulting in increased visibility on failing endpoints.
- Enabled Pyroscope to run alongside CI to generate flame graphs, this resulted in identifying groups of obsolete tests with long run times. Removing these discovered tests sped up CI by ~30%.
- Developed and executed a comprehensive browser automation ownership plan, outlining a one-year road-map for efficient browser automation processes.

Progrexion

Software Engineer – Python

Salt Lake City, UT

March 2020 – April 2021

- Developed and integrated machine learning applications in Python using Flask, Docker, and Redis. Services were deployed to the cloud via AWS/Heroku.
- Developed an internal call routing API utilizing machine learning that increased conversion rate by 8%.
- Developed a Flask API datastore that was able to query data from disparate sources and servers using HTTP and MySQL.

Chart Logic

Software Engineer in Test (Intern) - C#

Salt Lake City, UT

June 2019 – February 2020

- Responsible for testing software (Functional, Regression, System) and automating tests using Selenium in C#.

EDUCATION

University of Utah

Bachelor of Science in Computer Engineering

Salt Lake City, UT

Graduated December 2019

TECHNICAL SKILLS

- **Languages:** Typescript (4 years), Python (3 years), SQL (3 years), HTML5 (2 years), CSS, C, C# (3 years), Java, Go
- **Technologies:** Git, PostgreSQL, CI/CD, Redis, AWS, Kubernetes, Kafka, React.js, Angular, SQLServer, Visual Studio

Hobbies: Play drums in successful local bands, competitive Super Smash Bros. Player, car enthusiast.
